

Multi-Function Countertops

Acacia

in Various Colors

There are about 2000 different Acacia species in our World, most of them originally coming from Australia and southern Asia. We use the Acacia Mangium specie which has the best wood and water repellent properties of them all, with inherent oils and resins similar to teak. Harvested from FSC certified plantations and then processed to worktops and panels in a World Class manner as per our systems.

Oak

Oak might be either the Quercus mongolia that grows in northern China and eastern Russia or German or French oak Quercus Robur that has been imported as logs or sawn timber to our production plants in Asia. The 2 species are very similar in their characters and even botanic professionals will have difficulties saying which one is what when looking at our panels.

Hevea

The correct Latin name is HEVEA BRASILIENSIS which refers to where it has its origins. Commonly known as Rubberwood, planted for being tapped of its Latex for about 25 years, then harvested for use of its wood. There are no FSC certified plantations in this World for these as grown in smallholdings where farmers initial purpose for planting is not to sell the wood, but the Latex they generate.

Karri

KARRI is regarded to be the second best of all the 'AUSSIE REDS' just behind JARRAH as number 1. The deep red colour of KARRI will go darker with time by the influence of light once installed. We created a construction we call HYBRID, as these worktops both have full length wide lamellas on outer edges and buttjoint wide lamellas in the middle. With few knots, this gives a harmonious reddish appearance further enhanced by that we oil the KARRI tops with our clear ZERO % VOC Hardwax oil.

Table Tops ▼

All our Wood Table Tops are made using a flexible glue giving joints stronger than the wood itself and passing stringent weather resistance tests from freezing to boiling conditions, fulfilling every requirement concerning formaldehyde emissions and chemical contents.

We have since 1995 been supplying wood panels like worktops, countertops, benchtops, stair panels, shelving and more to the Kitchen, Contract and Building Industry as well as to Furniture and DIY Retailers all over the World.

The tops are suitable for any carpentry use, for making beds, shelving, tables, end panels and so forth.
